

INTERPRETATION OF THE CURRICULUM DESIGNS

DIFFERENCE BETWEEN A SYLLABUS AND A CURRICULUM DESIGN

- A syllabus is a **concise** written guideline on a specific learning or subject area of the curriculum
- It outlines and **provides** the objectives, the content time allocation and resources to be used during the execution of the lesson.
- A curriculum design is a **detailed** outline of what is to be covered in a specific learning area.
- It **prescribes** how learning outcomes will be actualized through suggested learning experiences, key inquiry questions and learning resources.
- It provides the teacher with suggested **criterion** referenced assessment rubrics in every sub-strand.

COMPONENTS OF THE CURRICULUM DESIGN

- National Goals of Education
- Level learning outcomes
- Essence statement
- Learning area general outcomes
- Strands and Sub strands
- Specific learning outcomes
- Suggested learning experiences
- Key Inquiry Question(s)
- Core competences to be developed
- Pertinent and Contemporary issues developed

- Values
- Link to other learning areas
- Community Service Learning
- Non-formal activities to support learning
- Suggested learning and teaching resources
- Suggested Assessment methods
- Assessment rubric

ESSENCE STATEMENT

- An essence statement gives a general overview of a learning area. It summarizes the fundamental ideas of each learning area. It also explains the **rationale and justification** of inclusion of the learning area in the curriculum.

STRAND AND SUB-STRAND

- A strand is a **broad area of study** within a specific learning area. It is a **consistent phenomenological idea or concept**, that runs through the learning area.
- A strand also **cuts across** all levels of education.
- A sub-strand represents smaller concepts within the strand

LEARNING OUTCOMES

They are the end result of what the learner is able to **demonstrate upon** completion of a lesson, sub-strand, strand or level.

Categories of learning outcomes.

1. Level learning outcomes

These are the demonstrable end results expected in learners after having gone through a **specific level** of CBC education. For example, Early Years, Middle School and Senior School Education. They are stated in general terms.

2. General learning outcomes

These learning outcomes indicate what the learner is expected to achieve in **a given learning area**.

3. Specific Learning Outcomes

specific learning outcomes are lesson based

Each strand/sub strand/theme in the curriculum designs has specific learning outcomes which are geared towards achieving the general learning outcomes.

VALUES

Values are standards set by the society to **regulate** behaviour of people who live therein.

They are destined to **guide** members of the society on how to respond or behave in given circumstances.

They **influence** how people feel, act and make choices in life

Nurturing of values will enhance achievement of the curriculum reforms' vision, especially in molding **ethical** citizens.

The eight core values which have been **mainstreamed** in CBC are

- Love
- Responsibility
- Respect
- Unity
- Peace
- Patriotism
- Social Justice
- Integrity

Mainstreaming is the process of **identifying suitable** opportunities in specific learning areas, where values can be **incorporated** in the learning experiences.

PERTINENT AND CONTEMPORARY ISSUES

Pertinent and Contemporary Issues are those that **influence** people in their everyday life. These are health related issues, lifeskills and socio-economic issues.

COMMUNITY SERVICE LEARNING

Community Service Learning (CSL) is an experiential learning which **reinforce** what is learnt in the classroom. It promotes the learner's growth in social skills by building strong and **productive relationships** with the community.

LINK TO OTHER LEARNING AREAS

Link to other learning areas in CBC refers to **transfer** of knowledge, skills and attitudes learnt in one learning area to another.

a conscious effort to use concepts in one learning area to **relate** knowledge, skills and attitudes to another learning area.

The linkages give learners a **holistic perception** of learning by allowing them to see inter-relationships in different learning areas.

Inter-relationship of National Goals of Education to Learning Outcomes

National Goal of Education	Promote positive attitudes towards good health and environmental protection (No.8)
	
Level Learning Outcome	Explore the immediate environment for learning and enjoyment (f)
	
Subject General Learning Outcome	Learning area: Environmental Activities Develop appropriate organizational, practical technological skills for problem solving in conserving the environment
	
Specific Learning Outcome	Learning area: Environmental Activities

Assessment

Assessment in CBC can be done through the following methods:

- Observation
- Written assignment
- Oral questions

It should be noted that in CBC, there should no **ranking** of learners. Learner's competencies should be assessed at an individual's level.

It should also be noted that **assessment rubric** for a **specific learning outcome** should be developed for each learner.

THE END

THANK YOU
