-it involves training
2. State **two** reasons that make Agriculture important to Kenyan economy. (2mks)
-acts as a source of food.
-provides employment
-promotes industrial development.
3. State **two** characteristics of shifting cultivation. (2mks)
-helps to reduce costs by avoiding the buying of pesticides and fertilizers.
-it is only limited to annual crops.
-Agricultural production is low.
-make use of simple hand tools like pangas.
- b) State **two** advantages of shifting cultivation. (2mks)
- helps to reduce land disputes.
-helps to control parasitic weeds.
4. State **four** ways through which Agriculture contributes to Industrial Development. (4mks)
-providing raw materials to agro-based industries.
-provides a market for industrial goods.
Acts as a source of capital to start small industries.
5. Differentiate between pomoculture and olericulture. (2mks)
-pomoculture-growing of fruits while olericulture is growing of vegetables.
6. State reasons that make ranching to be regarded as a form of advanced pastoral - nomadism. (6 mks)
-water is provided at specific watering points.
-animals are confined through fencing.
-mating is controlled.
-there is supplementary feeding.
-control of parasites and diseases is done.
-there is controlled grazing, thus minimizing erosion.
7. State the importance of soil to plants.
-provides a good habitat to useful soil organism.
-provides support/anchorage to plants.
-contains the nutrients and water required by plants.
-contains organic matter that acts as food for useful soil organisms.
- 8a) State **four** ways in which biological agents may enhance soil formation.

- burrowing animals eg mules dig out the soil causing mechanical break up of small rock fragments from the main rock.
- decomposition of organic matter brought about by micro-organisms.
- root penetration into cracks in a rock causes its disintegration.

-large animals trample over surfaces of rocks with their hooves breaking away small rock particles.

b) List **four** environmental factors that can affect crop distribution in Kenya.

- prevailing winds.
- type of soil
- Temperature
- rainfall
