

## BIOLOGY FORM ONE MARKING SCHEME

1. Define the term Biology. (1mk)
  - **Study of living things**
  - **Branches of science which deals with the study of living things.**
2. State and define the three branches of biology. (6mks)
  - **Botony- (Branch of biology) which deals with study of plants**
  - **Zoology- (branch of biology) which deals with study of animals.**
  - **Micro biology – (branch of biology) which deals with study of micro-organism.**
3. Outline four ways in which study of biology is applied. (4mks)
  - **Pursue careers of medicine agriculture dentistry, public health**
  - **Enhances international cooperation in areas like medicine, environmental conservation etc.**
  - **Enhances understanding of human body developmental stages**
- List six characteristics of living things (6mks)
  - **Imparts scientific skills. E.g. drawing, recording analyzing.**
  - **Solving Environmental problems e.g pollution drought.**
4.
  - **They grow and develop**
  - **They have nutrition/they utilize nutrients**
  - **They respire**
  - **They have gaseous exchange**
  - **They reproduce**
  - **They are irritable/respond to stimulus**
  - **They excrete**
  - **The move**
5. The table below shows common apparatus used to collect and observe specimen. Complete the table appropriately. (8mks)

| DIAGRAM                                                                             | NAME        | USE                               |
|-------------------------------------------------------------------------------------|-------------|-----------------------------------|
|  | A hand lens | Enlarge objects under observation |

|  |                          |                                                                             |
|--|--------------------------|-----------------------------------------------------------------------------|
|  | <b>A pit fall trap</b>   | <b>Catching crawling animals</b>                                            |
|  | <b>A pooter</b>          | <b>Such small animals from surfaces eg barks of trees</b>                   |
|  | <b>A pair of forceps</b> | <b>Picking up small injurious specimen eg stinging nettle, spideus bees</b> |

6. Outline the precautions that should be taken during collection and observation of specimen.

- **immobilize highly mobile specimen**
- **Handle with care all ingenious or dangerous specimens like bees.**
- **return live specimen to their labitate (to maintain ecological balance)**
- **do not harm specimen during collection to avoid disturbance of parts)**
- **Collect only the number needed to avoid wastage.**

7. Explain how nutrition is different between plants and animals . (2mks)

- Animals feed in ready-made food. plants make then own food from water, carbon iv oxide and sunlight
