

CAREER OPPORTUNITIES IN ICT

Network Administrator

Once installed on the right hardware platform and configured as a server, Network OS provide network management tools to network administrators.

The Network administrator can use the tools to do the following:

1. Secure the network against unauthorized access.
2. Track network usage and keep a log of all the people who have used the network.
3. Ensure that the various systems on the network are able to communicate and work with each other.
4. Monitor the performance to ensure maximum throughput on the network.
