

**Kenya Institute of Curriculum Development**

# **ACTION RESEARCH**

# SESSION OUTCOMES

- describe the role of action research in the implementation of CBC;
- demonstrate skills to identify problems based on everyday experiences;
- appreciate the importance of creating practical solutions to problems identified

# What it is

- What -Activities
- Who – teachers
- Why – perform to solve immediate problems
- Which – affect learning
- When – during implementation
- How –individually or collaboratively

# ROLE OF ACTION RESEARCH

- Reflective **process** of **progressive** problem solving carried out by **individuals** working with others in teams or as part of a "community of practice".
- Aim of improving the way teachers **addresses issues and solve problems** that arise as they facilitate learning.

## Cont'

Objective during facilitation;

- Guidance for the teacher on how to identify own specific problems and coming up with practical solutions.
- Provide skills to teachers to actively find out their everyday classroom concerns and create practical solutions 'homegrown'

# 5Ws and H

- What – is the problem?
- Who – individually or collaboratively
- Why – is there a problem(cause)
- Which – is the solution is best(plan)
- When – does it occur in implementation
- How –judging and action

Activity; Monitoring feedback

# Identify problem-(what is see)

- Design interpretation?
  - ❖ Learning outcomes
  - ❖ Learning experiences
  - ❖ KIQs
  - ❖ Core-competencies?
  - ❖ PCIs?
  - ❖ Values?
  - ❖ ICT integration?
  - ❖ CSL
- Assessment?
- Resources ?
- Pedagogy
- Preparation of Professional documents?

# Judgment situation; Device a plan

| Problem              | Cause                | Solution        | Action by              |
|----------------------|----------------------|-----------------|------------------------|
| Assigning homework   | Inadequate workbooks | PE&E<br>CSL     | Self and Parent        |
| Interpreting designs | Inadequate training  | Peer teaching   | Teachers in this grade |
| Class control        | Too many activities  | Remedial lesson | self                   |
| -----                | -----                | -----           | -----                  |

## Action/actualize the plan

- For each problem have a possible solution
- Activate the solution and take appropriate responsibility
- Collect data /feedback

# Observe

- Collect appropriate feed back of what you are doing
- Collecting information regarding your encounters during teaching and learning
- As the new idea is tried out, the teacher makes observations and records them.

# Reflect

- Analyse and share whether it worked and if there is something you could do differently to improve learning
- Restart process
