

Mount Kenya  University

CHAPTER FIVE INSTRUCTIONAL LEADERSHIP AND FINANCIAL LITERACY EXPOSITIONS

**PREPARED BY
DR. RUTH THINGURI (PhD)
SCHOOL OF EDUCATION**

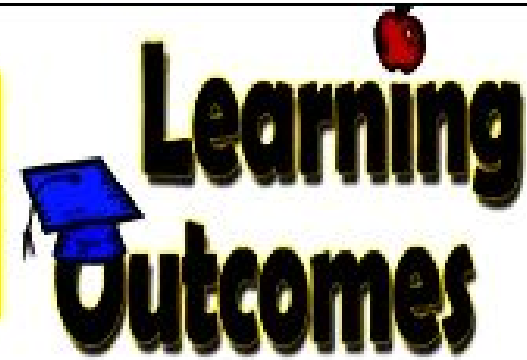

THE PURPOSE

- To enhance participants' knowledge, skills and attitudes in instructional leadership, technology and Financial Literacy

LEARNING OUTCOMES

- Participants will....
- Demonstrate knowledge of the concept of instructional leadership.
- Demonstrate understanding of the roles of teachers as instructional leaders.
- Demonstrate understanding of the role of teacher as an designer of technology
- Enhance knowledge and skills in Financial Literacy

CRITICAL CONTENT

- Concept of Instructional leadership for teachers,
- The roles of teachers as instructional leaders, ,
- The concept of teacher technology instructional leadership
- Concept of Financial Literacy:
- Financial Terminologies & Applications

CRITICAL
CONTENT

LEARNING STRATEGIES AND ACTIVITIES

- **Learning Strategies and Activities**
- Participants will be actively involved in “**learning by doing**”. Learning strategies and activities will include: **case studies, analysis, planning tasks, small group activities, document review, discussion groups, reading and reflection.**

LESSONS OVERVIEW

- 1. KWL on Instructional Leadership and Financial Literacy **lessons**
- 2. Lesson Exposition
- 3. Group Tasks
- 4. Group Processing
- 5. Reflection on the lesson

Instructional Leadership

Focus 101

High-achieving instructional leaders who strive to push a school

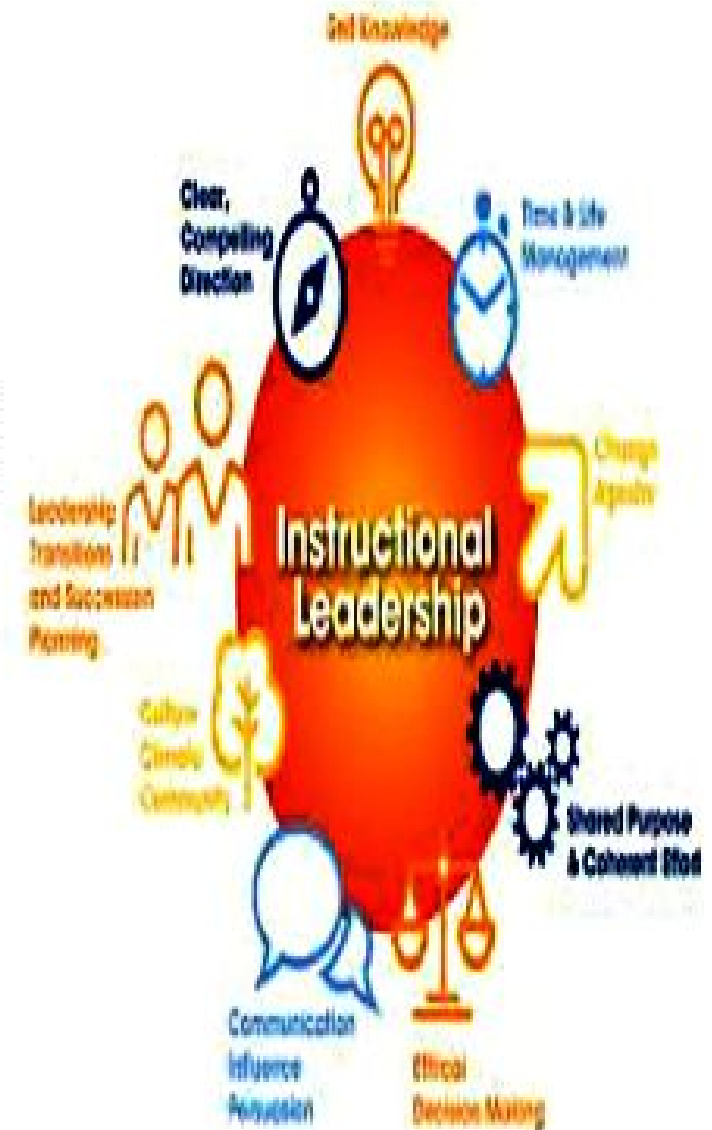

Focus 201

People need to be leading, not just in relation to the way we know, but in relation to the way we do it. It's not just about the data, it's about the way we do it and the way we do it.

Focus 301

Effective instructional leaders who strive to push a school

LESSON ONE

INTRODUCTION TO THE CONCEPT OF INSTRUCTIONAL LEADERSHIP FOR TEACHERS

- Introduction to the concept of instructional leadership for teachers: Background information
- *Instructional leadership entails teachers focusing more on instructional roles as knowledgeable and experts who are able to lead and support the teaching and learning processes.*
- *A teacher leader is defined as an individual in a non-supervisory, school-based, instructional leadership role. The leader builds his/her own instructional capacity and that of other colleagues with an aim of increasing learner learning and achievement. This is done through interactions with colleagues, heads of institutions, and other members of the school community.*
- *In this role, teacher leaders have the potential to impact professional learning communities that influence other teachers, to contribute to the development of instructional materials and strategies, and to enhance learner achievement.*
- *In the last few decades there has been a paradigm shift in educational reform that has led researchers to examine the different roles that teachers can assume as leaders.*
- *From these trends, teachers are being recognized as a source of knowledge and a means of influencing instructional change—both their own and that of their colleagues.*
- *Scholars argue that two trends in education have resulted in the conceptualization of teacher leadership in curriculum instruction:*
 1. *The effort to professionalize teaching and*
 2. *The focus on academic accountability and increased attention to instructional quality.*

THE DIFFERENT ROLES THAT TEACHERS CAN ASSUME AS LEADERS.

- *The different roles that teachers can assume as leaders.*
- **5 Facilitators:** Another role the classroom teacher leader can serve is facilitator: A facilitator creates a space where expertise does not solely reside with the administration or outside consultants. Instead, classroom teacher leaders bring teachers and administrators together to problem-solve and learn together.
- **6. Teacher leaders can also function as mediators** between the needs and responsibilities of the administration and the needs at the classroom level. Classroom teacher leaders who serve as mediators disrupt the traditional top-down hierarchy.
- **In conclusion teachers as model, facilitator, or mediator,** teachers are assuming leadership roles that alter the traditional top-down hierarchy and cellular nature of schools, which have hindered the professionalization of teaching

GROUP TASK

- In base groups, discuss and:
 - 1. Demonstrate your understanding of concepts of instructional leadership
 - 2. Discuss the role of a teacher as an instructional leader providing practical examples from your classroom
 - 2. Demonstrate how to handle the facets of instructional leadership for teachers focusing on:
 - i. Provision of in-service training
 - ii. Development of supervisory strategies
 - iii. Development of instructional materials
 - iv. Evaluation of students

LESSON TWO

TEACHERS AND ADMINISTRATORS HAVE DIFFERENT ROLES WHEN IT COMES TO TEACHER INSTRUCTIONAL LEADERSHIP. LET US DISCUSS THE INTERPLAY

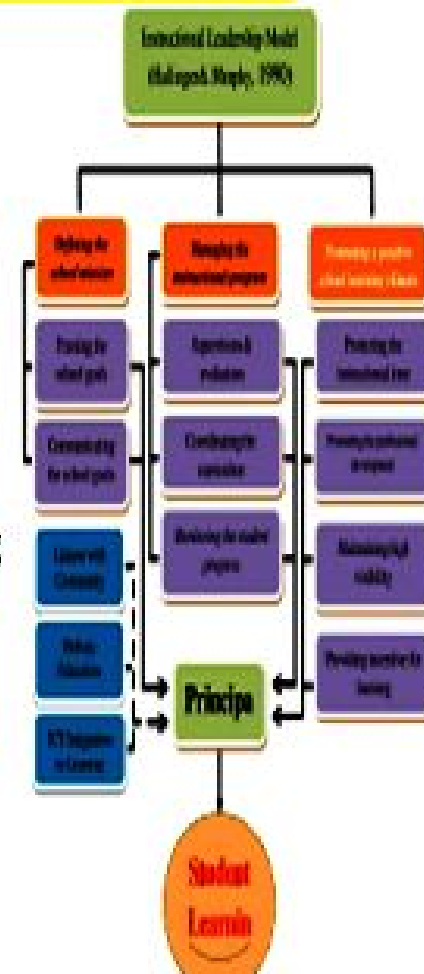

- **Teacher as an instructional leader role as mentioned earlier include:**
- **1.The leader builds instructional capacity**
- **2.Teacher leaders have the potential to impact professional learning communities**
- **3.Teacher as a source of knowledge:**
- **4.Teacher as model or as an exemplar**
- **5 Facilitators:** Another role the classroom teacher leader can serve is facilitator:
- **6.Teacher leaders can also function as mediators** between the needs and responsibilities of the administration and the needs at the classroom level.
- **As model, facilitator, or mediator,** teachers are assuming leadership roles that alter the traditional top-down hierarchy and cellular nature of schools, which have hindered the professionalization of teaching

Purpose of Instructional Leadership

- School leaders need to learn about high-quality instruction and assess so that they can motivate and support the teachers.
- School leaders then organize professional learning for the teachers and otherwise help teachers improve their classroom practices.
- With improved instruction, student achievement will also improve.
- Takes action that includes strategic planning, coaching, and professional development for teachers and other staff ("Principles of Learning" about the ideas and practices that promote students' academic achievement).

TEACHER INSTRUCTIONAL LEADERSHIP SIMILAR TO PRINCIPALS

- Teacher Instructional leadership similar to principals
- **1) *Developing mission and goals:*** leader's role in *defining the school mission* focuses on two functions: framing clear school goals and communicating clear school goals
- **2) *Managing the education production function:*** In the area of *managing the instructional program*, principals have three functions: supervising and evaluating instruction, coordinating curriculum, and monitoring student progress.
- **3) *Promoting an academic learning climate:*** In regards to *promoting a positive school-learning climate* principals have five functions: protecting instructional time, promoting professional development, maintaining high visibility, providing incentives for teachers, and providing incentives for learning.
- **4) *Developing a supportive work environment.:*** *supporting teacher growth and development*, both individually and collectively, & *procuring and distributing resources*, including materials, time, support, and compensation,

GROUP TASK

- **Group tasks on roles of teachers as instructional leaders and administrators**
- In base groups discuss (refer to the background information) and then using a Venn diagram, show the common roles between a teacher as an instructional leader and an institutional administrator.
- Share your responses with the larger group

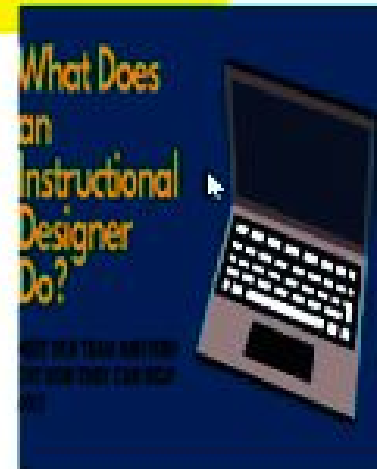

LESSON THREE

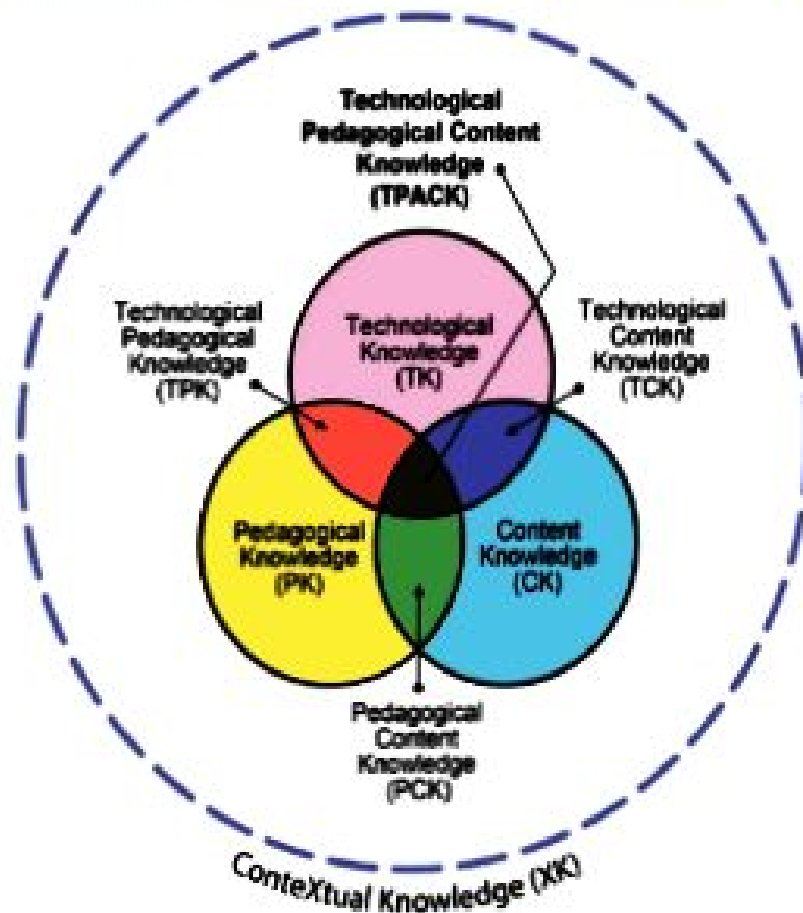

TECHNOLOGY DESIGNER FOR LEARNING: BACKGROUND INFORMATION

- The implementation of TPACK strategies is increasingly harnessed by technology.
- There is a growing emphasis on teachers' technological pedagogical content knowledge (TPACK) marked by an integration of knowledge in all three key components: **technology, pedagogy and content.**
- **Designing technology** –integrated learning will continue playing a crucial role. **Teacher-related factors such as confidence, attitudes toward technology integration, and willingness to undertake a change incorporating technology use for learner learning are hallmarks of this century's best teacher.**
- It is becoming imperative to integrate the teaching of information literacy and technology skills into regular curriculum. Such skills are essential for effective functioning in today's knowledge society.
- Effective integration of technology into the classroom depends on teachers who have the knowledge of how to use technology to meet instructional goals.

THE TECHNOLOGICAL PEDAGOGICAL CONTENT KNOWLEDGE (TPACK) FRAMEWORK

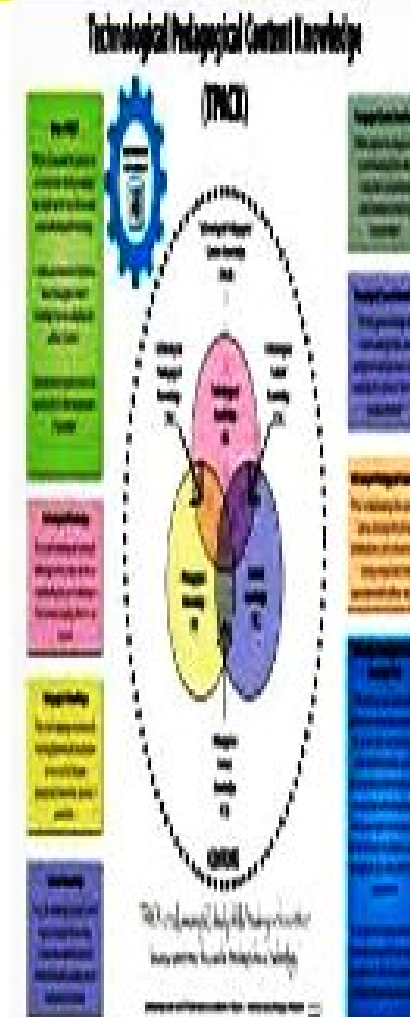

- The **Technological pedagogical content knowledge (TPACK)** framework
1. Describes the kinds of knowledge required by teachers for the successful integration of technology in teaching.
 2. It suggests that teachers need to know about the intersections of **technology, pedagogy, and content**.
 3. Specifically, **how these areas of knowledge interact and influence one another in unique and specific contexts. In terms of teaching with technology**

THE TECHNOLOGICAL PEDAGOGICAL CONTENT KNOWLEDGE (TPACK) FRAMEWORK

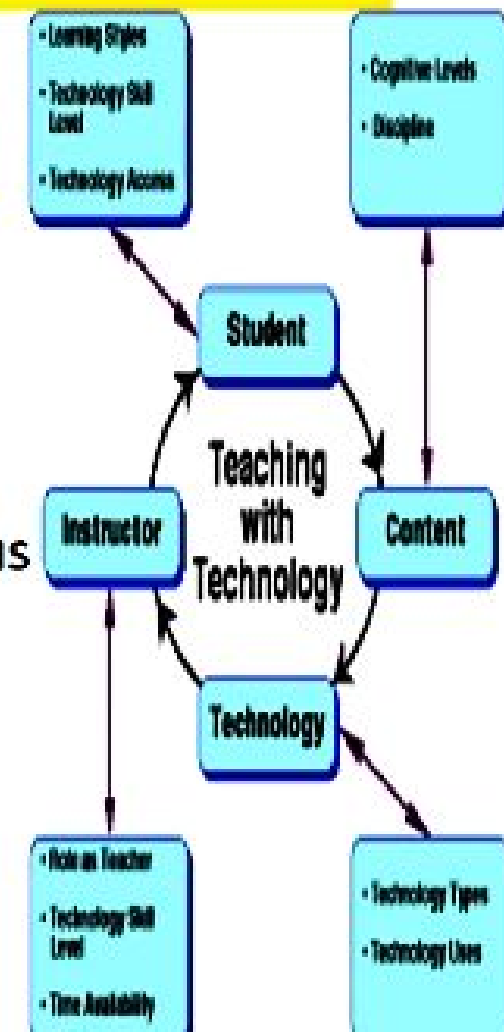

- The TPACK framework looks at **content knowledge (CK)** as the "what" that is the **subject matter** (arts, English, mathematics, science, etc.) teachers teach,
- **Pedagogical knowledge (PK)** is the "how" that tells how the teacher will make the content more accessible (via direct instruction, inquiry, group discussion, debate, modeling, etc.).
- Then, **technological knowledge (TK)** as the "partner" answering the question of what tools (laptops, projects, smart boards, multimedia, simulations, etc.) will be selected to make the content more accessible to the students.
- The TPACK framework goes beyond seeing these three knowledge bases in isolation and goes further by emphasizing the kinds of knowledge that lie at the intersections between three primary forms

THE ROLE OF THE TEACHER IN TECHNOLOGY INSTRUCTION

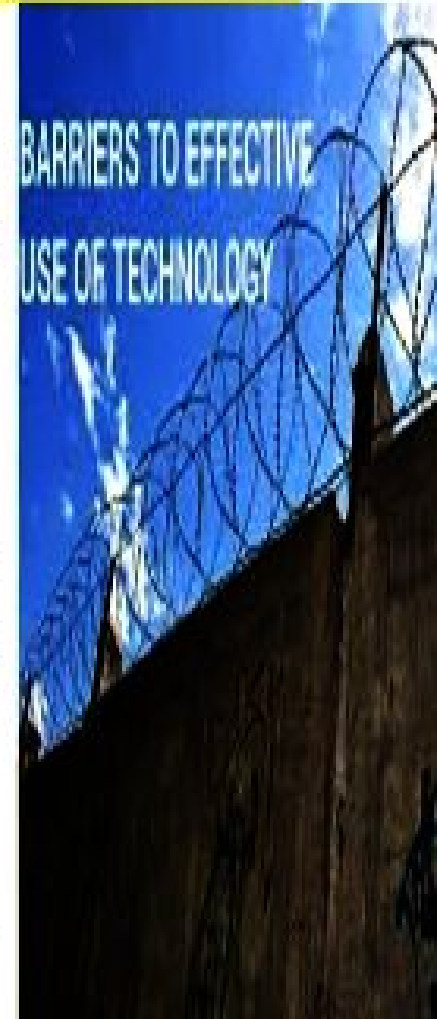

- **The role of the teacher in technology instruction**
- **1- Planning And Providing Electronic Content For Learners,**
- **2. Having General and Specific Skills-**Key person in helping learners to access the capabilities of technology is the class teacher who need to posses the digital and application skills
- **2.Creates Motivation-** If the teacher can create a positive attitude in learning the lessons; it will motivate them in learning.
- **3.Synchronous and Asynchronous Teaching-** In asynchronous learning, learners can refer to the course content and notes with arbitrary speed and based on their needs, and they can communicate with each other and their teachers through electronic means and can engaged in debate. In the Synchronous training, students will present in a virtual classroom immediately.

FACTORS INFLUENCING THE ADOPTION AND INTEGRATION OF ICT INTO TEACHING

- **Factors influencing the adoption and integration of ICT into teaching**
- **Teacher/personal characteristics-**
Personal characteristics such as educational level, age, gender, educational experience, experience with the computer for educational purpose and attitude towards computers can influence the adoption of a technology,
- **Teacher related factors** such as confidence, attitudes toward technology integration, and willingness to undertake a change incorporating technology use for learner learning are hallmarks of this century's best teacher.
- **Teachers' attitudes:** To successfully initiate and implement educational technology in school's program depends strongly on the teachers' support and attitudes. It is believed that if teachers perceived technology programs as neither fulfilling their needs nor their students' needs, it is likely that they will not integrate the technology into their teaching and learning.
- **ICT Competence** :Computer competence is defined as being able to handle a wide range of varying computer applications for various purposes
- **Computer self-efficacy** : Research has been conducted on teacher's self-efficacy and reported to have greater effect on their use of ICT. Self-efficacy is defined as a belief in one's own abilities to perform an action or activity necessary to achieve a goal or task

FACTORS INFLUENCING THE ADOPTION AND INTEGRATION OF ICT INTO TEACHING

- **Gender** : Gender differences and the use of ICT have been reported in several studies. However, studies concerning teachers' gender and ICT use have cited female teachers' low levels of computer use due to their limited technology access, skill, and interest
- **Teaching Experience** : Though some research reported that teachers' experience in teaching did not influence their use of computer technology in teaching most research showed that teaching experience influence the successful use of ICT in classrooms
- **Teacher workload** : Many studies have revealed that the workloads of teachers influence their acceptance of technology in classrooms.

FACTORS INFLUENCING THE ADOPTION AND INTEGRATION OF ICT INTO TEACHING

- **Institutional characteristics** : Institutional factors help to improve teachers' existing attributes
- **Professional development** : Teachers' professional development is a key factor to successful integration of computers into classroom teaching. Several studies have revealed that whether beginner or experienced, ICT-related training programs develop teachers' competences in computer use
- **Accessibility** : Access to ICT infrastructure and resources in schools is a necessary condition to the integration of ICT in education
- **Technical support** : Jones (2004) reported that the breakdown of a computer causes interruptions and if there is lack of technical assistance, then it is likely that the regular repairs of the computer will not be carried out resulting in teachers not using computers in teaching. The effect is that teachers will be discouraged from using computers because of fear of equipment failure since no one would give them technical support in case there is technical problem.

GROUP TASK

- **Group task on teachers as technology designers for learning**
- **In base groups discuss and:**
 - 1. Demonstrate the role of a Instructional leader as a Technology Designer for Learning**
 - 2. Identify ways in which technology can be integrated in Curriculum delivery**
 - 3. Demonstrate your understanding of the factors that influence the integration of technology in instruction**
 - 4. Share your response to (i) with members of your group and as a group prepare a joint presentation on the role of instructional leaders as technology designers for learning and share with the larger group.**
