

## PAINT

**Paint** is a program used for creating, editing, and viewing simple or elaborate, black and white or colour drawings (pictures).

After you create a drawing, you can print it or use it in another document.

### To start Paint;

1. Click **Start**, point to **Programs**, point to **Accessories**, and then click **Paint**.

**Note.** For information about how to use Paint, click the **Help** menu in Paint.

### To Paint;

- Click the shape or line you want to use from the toolbox.
  - Click the line width at the bottom of the toolbox.
  - Click the colour you want to use from the Colour box.
- To draw, drag the pointer across the screen.

### To show or hide the Toolbox, Colour box, Status bar;

- ◆ Click the **View** menu and make sure a checkmark appears next to item you want displayed.
- To hide the item, click to clear the check mark.

**Note.** You can drag the toolbox to any location in the window.

## DRAWING LINES AND SHAPES

### To draw a straight line.

1. In the toolbox, click **\ (line)**.
2. Click a line width at the bottom of the toolbox.
3. To draw the line, drag the pointer.

**Note.** To draw a perfectly horizontal, vertical, or 45-degree diagonal line, hold down **SHIFT** while dragging.

### To draw a free-form line.

1. In the toolbox, click **(Pencil)**.
2. To draw the line, drag the pointer.

### To undo changes.

- ◆ On the **Edit** menu, click **Undo** (or press **CTRL+X**).

**Note.** You can undo up to three changes by clicking the **Edit** menu, and then click **Undo** for each change.

### To draw a curved line.

1. In the toolbox, click (the 'S' line).
2. At the bottom of the toolbox, click a line width.
3. Drag the pointer to draw a straight line.
4. Click where you want one arc of the curve to be, & then drag the pointer to adjust the curve. Repeat this step for a second arc.

**Note.** Each curve must have at least one arc but no more than two.

### To draw an ellipse or circle.

1. In the toolbox, click **O** (the oval tool).
2. To draw an ellipse, drag the pointer diagonally.  
To draw a perfect circle, hold down **SHIFT** while you drag.

**Note.** To create a colored fill, click a fill style at the bottom of the toolbox. Click a new color in the color box to change the line color, or right-click a new color to change the fill color.

**To draw a rectangle or square.**

1. In the toolbox, click  (the rectangle tool) to create a square-cornered shape, or click  (the rounded corner tool) to create a round-cornered shape.
2. To draw a rectangle, drag the pointer diagonally in the direction you want.  
To draw a square, hold down **SHIFT** while dragging the pointer.

**Note**

- The border width of the box is the same as the thickness selected for the line tools. To change the border thickness, click the line or curve tool in the toolbox, and then click the thickness you want in the box below the toolbox.

**To draw a polygon.**

1. In the toolbox, click (the **polygon** tool).
2. To draw the polygon, drag the pointer and click at each corner. Double-click when through.  
To use only 45- and 90-degree angles, hold down **SHIFT** while dragging.

**PUTTING TEXT IN PICTURES.****To type and format text**

1. In the toolbox, click (the 'A' button).
2. Drag the pointer diagonally to create a *Text frame*.
3. On the text toolbar, click the Font, Size, and Style you want for the text.
4. Click inside the text frame, type the text, and then do any of the following as needed.
  - Move or enlarge the text frame.
  - Click a color to change the color of the text.
  - Click (*opaque image button*) in the toolbox to insert the text on a colored background.  
Then right-click in the color box to change the background color.
5. To insert text into the picture, click outside the text frame.

**Notes**

- To view the text toolbar, click the **View** menu, and then click **Text Toolbar**. If it obscures part of the **Paint** window, drag the toolbar to any location in the window.
- You can enter text into a picture only in **Normal view**.

**WORKING WITH COLOUR.****To set the default foreground and background colors.**

- ♦ To set the *foreground color*, click a color in the color box.
- ♦ To set the *background color*, right-click a color in the color box.

**Note.** The default background and foreground colors appear at the left in the color box. The top color chip represents the foreground color. The bottom color chip represents the background color.

**To fill an area or object with color.**

1. In the toolbox, click (**Fill with Colour**).
2. Click a colour from the **Colour box**.
3. Click the area or object you want to fill.

**Note.** If the shape being filled has any breaks in its border, the filling color leaks through to the rest of the drawing area. To find and close any openings, click the **View** menu, point to **Zoom**, and then click **Large Size** or **Custom**.

**To paint with a brush.**

1. In the toolbox, click (**Brush**).
2. At the bottom of the toolbox, click a brush shape.
3. To paint, drag the pointer.

### To create an airbrush effect (spray).

1. In the toolbox, click (**Airbrush**).
2. To change the size of the spray area, click a spray size at the bottom of the toolbox. To choose a spray colour, click a colour in the colour toolbox.
3. To spray, drag the pointer.

### To use black and white instead of color.

1. On the **Image** menu, click **Attributes**.
2. Under Colors, click to select **Black and white**.

**Note.** Once you have changed a colour picture to black and white, you cannot change it back to colour. If you change back to color, only new work will be in color.

### To invert all the colors in a picture.

- ♦ On the **Image** menu, click **Invert Colors**.

**Note.** Each color is replaced by its color complement. E.g., red becomes cyan, and blue becomes yellow.

### To change the color of an existing line.

1. In the toolbox, click (**Fill With Colour**).
2. In the color box, click a different color.
3. Position the paint cursor so that it is touching the line you want to change, and then click.

#### Notes

- To make sure you change only the line color and not the surrounding area, zoom the picture to a larger size.
- If the line is part of a shape, any connecting vertical and horizontal lines will also change to the new color.

## ERASING

### To erase a small area.

1. In the toolbox, click (the **eraser**).
2. To use a smaller or larger eraser, click an eraser shape at the bottom of the toolbox.
3. Drag the pointer over the area you want to erase.

**Note.** The selected background color shows what color the eraser will leave behind. You can change the background color by right-clicking another color in the color box.

### To erase a large area.

1. In the toolbox, click (*the rectangle selection tool*) to select a rectangular area or click (*the free form selection tool*) to select a free-form area.
2. Drag the pointer to select the area you want to erase.
3. On the **Edit** menu, click **Clear Selection**.

**Note.** The current background color will be used to fill the cleared area.

### To clear an entire image.

1. If any part of the image is selected, click outside of the selected area.
2. On the **Image** menu, click **Clear Image**.

## WORKING WITH PART OF THE PICTURE

### To select part of a picture.

To select a rectangular area, click (the rectangular selection tool) in the toolbox, and then drag the pointer diagonally across the area.

To select a free-form area, click (the free form selection tool), and then drag the pointer around the area.

**Note.** To remove the selection box, click outside the box.

#### To copy and paste part of a picture.

1. In the toolbox, click (the rectangular selection tool) to select a rectangular area or click (the free form selection tool) to select a free-form area.
2. Drag the pointer to define the area you want to copy.
3. Select a method of pasting:
  - ♦ Click (opaque image button) to paste opaquely.
  - ♦ Click (transparent image button) to paste transparently.
4. On the **Edit** menu, click **Copy**. Click on the **Edit** again, then choose **Paste**.
5. Drag the selection where you want it.

**Note.** You cannot paste graphics when the text tool is selected.

### CHANGING HOW YOUR PICTURE LOOKS ON THE SCREEN.

#### To change the size of your picture.

1. On the **Image** menu, click **Attributes**.
2. Click the unit of measurement you want to use for the width and height.
3. Type the measurements in **Width** and **Height**.

**Note.** You can also resize your picture by dragging the three image **Resize handles**, located at the bottom right corner and along the bottom and right sides of your picture.

#### To zoom in or out of a picture.

1. On the **View** menu, point to **Zoom**, and then click **Normal Size**, **Large Size**, or **Custom**.

#### To enlarge the size of the viewing area.

1. On the **View** menu, click **View Bitmap**.  
Your picture fills the entire viewing area. To return to your former view, click anywhere in the picture.

#### Notes

- You can also enlarge the size of the viewing area by hiding the toolbox, color box, or status bar. To do this, clear their check marks on the **View** menu.
- You cannot make changes to a picture in this view.

#### To display gridlines.

1. On the **View** menu, point to **Zoom**, and then click **Custom**.
2. Under **Zoom to**, click **400%**, **600%**, or **800%**, and then click **OK**.
3. On the **View** menu, point to **Zoom**, and then click **Show Grid**.

**Note.** To remove the gridlines, clear the **Show Grid** check mark,

-Or-

Click **View**, point to **Zoom**, and then click **Normal Size**.

#### To Flip or Rotate a picture or object.

1. In the toolbox, click (the rectangular selection tool) to select a rectangular area or click (the free form selection tool) to select a free-form area.
2. Drag a box around the item you want to flip or rotate.
3. At the bottom of the toolbox,
  - ♦ Click (opaque image button) to flip or rotate opaquely.
  - ♦ Click (transparent image button) to flip or rotate transparently.
4. On the **Image** menu, click **Flip/Rotate**.
5. Click the option you want.

### **To Stretch or Skew an item**

1. In the toolbox, click (the rectangular selection tool) to select a rectangular area or click (the free form selection tool) to select a free-form area.
2. Drag a box around the item you want to change.
3. On the **Image** menu, click **Stretch/Skew**.
4. Click the stretching or skewing option you want, and then enter the amount.
5. At the bottom of the toolbox,
  - ♦ Click (opaque image button) to stretch or skew opaquely.
  - ♦ Click (transparent image button) to stretch or skew transparently.

### **PRINTING**

#### **To print a picture.**

1. On the **File** menu, click **Print**.

#### **Notes**

- To see how the printed picture will look before you print, click **Print Preview** on the **File** menu.
- To set margins or change orientation, click **Page Setup** on the **File** menu.

### **TO USE A PICTURE AS THE DESKTOP BACKGROUND.**

1. Save the picture.
2. On the **File** menu, click
  - ♦ **Set As Wallpaper (Tiled)** to cover the screen with repetitions of your picture.
  - ♦ **Set As Wallpaper (Centered)** to place your picture in the center of the screen.
