

Learning Experiences

KENYA INSTITUTE OF CURRICULUM DEVELOPMENT

OBJECTIVES

By the end of the Session participants should be able to:

- 1) Define learning experiences
- 2) Discuss the importance of learning outcomes
- 3) Discuss factors necessary in selection of learning experiences
- 4) Discuss types of learning experiences in the curriculum designs
- 5) Appreciate the role parents and learning experiences play in education.

Activity 1:

- Lead the participants in the plenary to discuss when learning takes place.
- How can they define learning.
- What are learning experiences?

INTRODUCTION

- Learning refers to the **relative permanent change** in behaviour brought about through interactions or experiences with the environment.
- Learning Experiences can be defined as **interaction** in which **learning takes** place.
- A learner is exposed to situations and activities so as to develop desired knowledge, skills, values and attitudes.

- The experiences could be:
 - ❖ **Formal** featuring the classroom conditions and teaching methods;
 - ❖ **Non-formal** during which the learner is engaged in organized and structured activities taking place in or outside school
 - ❖ **Informal** which entails general school and home social interactions.
- Tyler defines LE as “***the interaction between the learner and external conditions in the environment to which he/she can react.***”

Contd...

- It covers **how**, **when** and **where** learning takes place
- Teacher has the responsibility to **invoke** the experience in which learning takes place.
- Selecting LE is guided by certain principles

Activity 2:

Instructions:

- Can you remember any learning experience during your school or college days?
- What makes it memorable?
- How did it make you feel?
- Buzz with your neighbor and share in the plenary.

The next slide summarises some of the likely **buzz words** that will emanate from the activity:

Real-life
Support
Meaningful
Discover
Guidance
Experiences
Freedom
Explore
Develop
Inquiry
Collaboration
Imagine
Focus
Challenge
Connections
Play Together

Activity 3:

- Ask participants in groups of 3-5 to discuss the purpose of learning experiences and the factors to consider when selecting activities for their learners?

Purpose of Learning Experiences

Learning experiences enable the learner to:

- acquire knowledge and develop skills, values and attitudes
- acquire the intended core competencies
- self-regulate and evaluate
- engage deeply in the learnt concepts
- reflect on the learning process
- interact with others during the learning process.

Factors to consider when selecting learning experiences

- Relevance to intended learning outcomes
- Developmental age level
- Learning resources
- Safety
- Size of the class
- Time required for the experience

Activity 3

- Provide participants with excerpts of curriculum designs in an activity area.
- In pairs, ask them to identify the types of learning experiences provided in the curriculum design
- Let them discuss the differences/similarities among the learning experiences

LEARNING EXPERIENCES IN CURRICULUM DESIGNS

The Curriculum Design has provided for LEs as:

- Suggested Learning Experiences as per sub-strand
- Non- formal learning experiences
- Community Service Learning Activities
- Linkage activities to PCIs

What Informs Learning Experiences

In Competency Based Curriculum, learner should be given opportunities to take responsibility for their learning through: embracing:

- ❖ Differentiated learning
- ❖ Multiple Intelligence Theory
- ❖ Learning Styles

Differentiated Learning

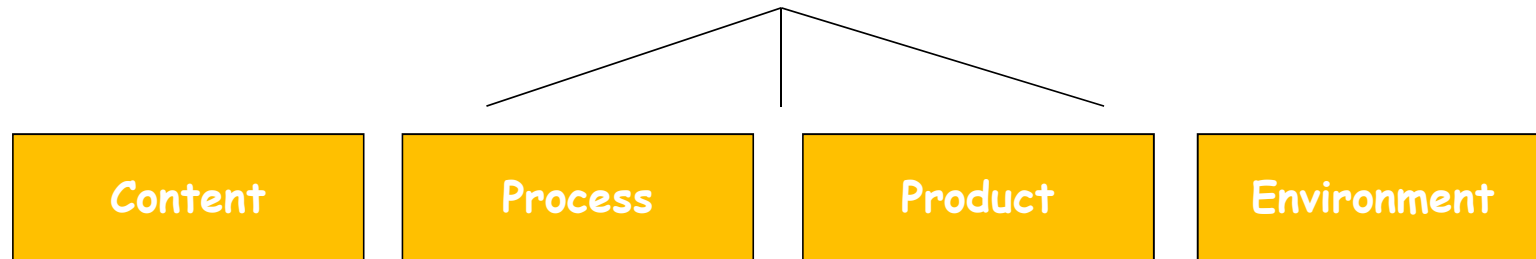

Learning Approach based on the fact that students differ in their:

- Learning styles
- Needs and interests
- Strengths and abilities
- Learning pace

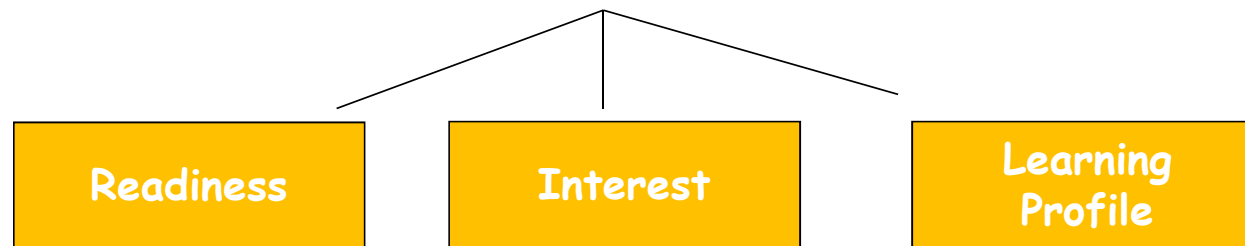

Classroom activities should be adapted to meet these differences.

Teachers Can Differentiate

According to Students'

Adapted from *The Differentiated Classroom: Responding to the Needs of All Learners* (Tomlinson, 1999).

DL Contd...

- Differentiated learning recognizes that learners learn differently and benefit from differentiated learning techniques in the classroom. It shifts focus from the “one-size-fits-all” approach to learning. The teacher, therefore, should employ varied learning experiences to cater for the different learning styles among learners. Ultimately, this will lead to improved learning outcomes.

Multiple Intelligences Theory

- Dr Howard Gardner posits through research that individuals possess multiple intelligences that should be identified and nurtured as indicated in the following:

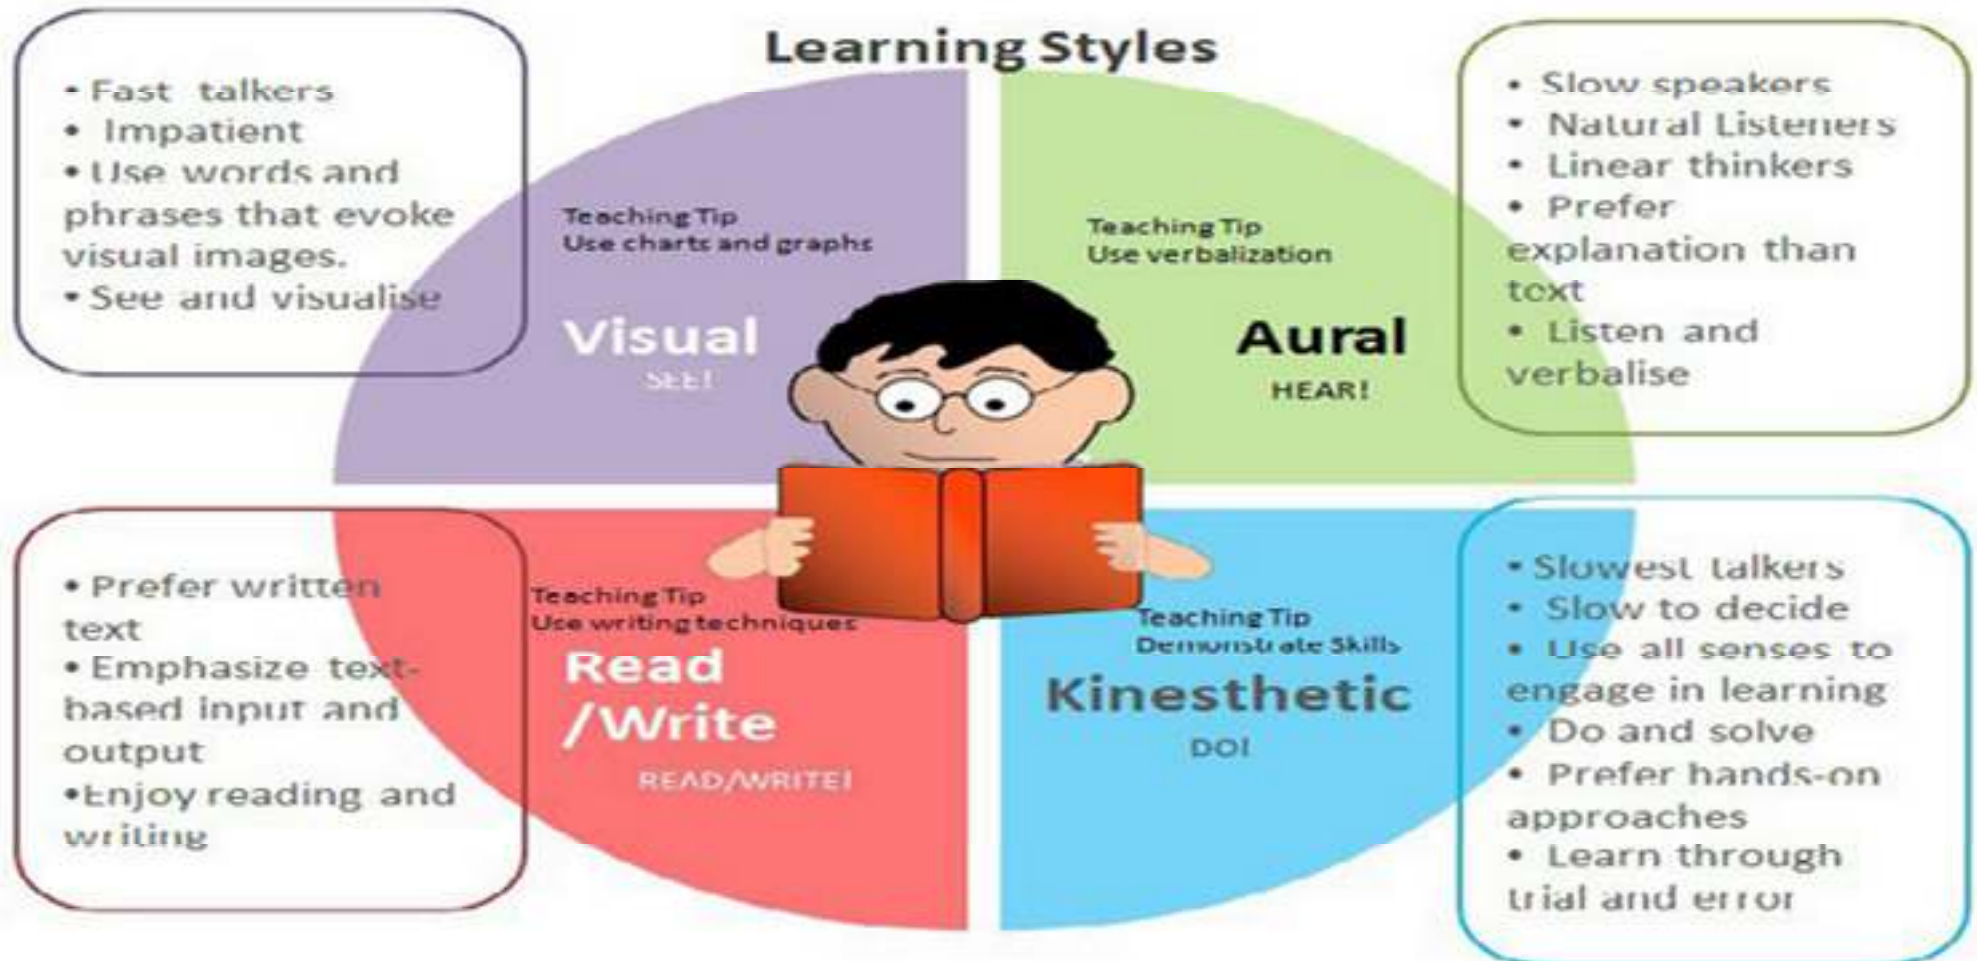

Learning Styles

- There are four broad learning styles have been identified. These are **Visual** (Seeing), **Aural**(Hearing), **Kinesthetic** (Doing) **Reading and Writing**.
- Some learners tend to learn best through one of the four, but supported by the other three, (refer to Figure).
- The teacher needs to ensure that all learners are catered for in each lesson by providing varied experiences.
- Learning styles are illustrated in the following diagramme.

Learning Styles

Activity 5

- Participants to discuss what implication knowledge on differentiated learning, multiple intelligences theory and the learning styles have on the learning process and experiences?

Principles of Good LEs

- **Validity:** To achieve given learning outcomes learners must be given opportunities to practise the specific behaviour indicated in the learning outcome.
- ❖ If focus is to solve problems in sanitation, ample opportunities should be provided for learners to come into contact with real problems and find solutions.

Principles Contd...

- Variety: Use of varied experiences (multisensory) to achieve the same learning outcome so long as they meet the criteria for effective learning
- Comprehensiveness: all the learning outcomes have corresponding LEs
- Adds value to the learner: LE puts learner first and should be purposeful

Contd....

- Promotes further learning: inspires pupils and students to be long-life learners
- Effective: Should enrich learning and not substitute it
- The learner must obtain satisfaction from carrying the kind of behaviour implied by the learning outcome.
e.g. if the learning outcome focuses on developing reading skills the learner must read widely

Suggested Learning Experiences

- The suggested learning experiences cover:
 - ❖ Knowledge
 - ❖ Skills
 - ❖ Values
 - ❖ Attitudes
- They are related to the content, specific learning outcomes and learning resources, are varied and include use of ICT devices

Activity 5:

- In groups, participants design learning activities that facilitate learning in an area of your choice (Use the curriculum designs)

Literacy Activities – Grade 2

Sub strand	Learning outcome	Learning experiences
Handwriting	a) use basic punctuation to convey the intended meaning, b) use legible handwriting to communicate effectively, c) develop speed and ease of handwriting, d) acquire the skill of shaping different letters to write syllables, words, and sentences neatly,	- Learners practise their pre -writing skills (how to grasp a pencil, use lined paper and how to sit when writing). - Learners are guided to participate in activities that develop their fine motor skills (beadwork, modelling, zipping using scissors, finger puppets, etc. - Learners practise sorting and grouping of letters based on specific features (ticks, tails, and hoops).

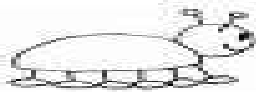

Examples of SLEs: Social Studies Grade 4

Sub-strand	Learning Outcomes	Learning experiences
Physical features in the county	a) identify the main physical features in the county b) examine the importance of the main physical features in the county b) adopt responsible behaviour to conserve the physical features	-Explore the neighbourhood to identify and record(draw, take photographs) of the main physical features -Discuss in groups the importance of the main physical features and share in class -Model or display pictures -Find out from parents how to conserve the main PF and report.

Examples of Tasks/Activities

CHOICE BOARD FOR MULTIPLE INTELLIGENCES

Verbal/Linguistic • Write instructions • Keep a personal journal • Create a poem • Create TV ads • Read stories to others • Retell in your own words • Teach concept mapping • Create crossword puzzle 	Logical/Mathematical • Create a time line • Compare/contrast ideas • Create an outline for a story • Design a map • Decipher codes • Create patterns • Design a game to show... 	Visual/Spatial • Create a poster • Draw a map • Create visual diagrams • Draw from different perspectives • Create a comic strip • Graph results of a survey 	
Interpersonal • Tell stories • Teach a cooperative game • Role play a situation • Discuss and come to a conclusion • Survey or interview others 	Free Choice		Body Kinesthetic • Make up a cooperative game • Practice physical exercise • Conduct hands-on experiments • Construct a model or representation 
Musical Rhythmic • Create raps • Play musical instruments • Write to music • Teach dance steps • Make up sounds and sound effects • Write a jingle • Create rhymes that... 	Naturalist • Collect and categorize data, materials, or ideas • Discover or experiment • Take a field trip • Study means of survival • Adapt materials to a new use • Label and classify 	Intrapersonal • Keep a personal journal • Write about personal experiences • Think about and plan... • Review or visualize • How would it feel to... • Imagine and write about the future 	

Non-formal learning experiences

- Non-Formal learning experiences refers to any organized, structured and systematic learning activities, which supplement and support acquisition of the and application of knowledge, skills, attitudes and values as envisaged in the competency-based curriculum.
- They are structured learning activities that are geared towards development of affective and psychomotor dimensions of learning. Some of the non-formal activities may include: singing, dancing, reciting poems, clubs and societies' activities, cultural festivals, music and drama festivals, science fairs, games and debates

Community Service Learning experiences

- These are learning experiences where learners are given opportunities to apply the acquired knowledge and skills to solve an identified problem within the community while at the same time improving own learning outcomes.
- e.g. Learners identify struggling readers in the family/neighbourhood and teach them how to read

Pertinent and Contemporary Issues

- **Activity 6:** Participants discuss what they understand by PCIs and identify the PCIs prevalent in their region

PCIs Contd...

- PCIs should be identified from the curriculum design.
- They are mainstreamed in all the Learning Areas and, in the schemes of work and lesson plans under the learning experiences.
- The teacher is expected to make conscious and deliberate efforts to bring PCIs out during the learning experiences failure to which he/she will unintentionally simply focus on the subject matter without give due consideration to them.

Why PCIs?

- Mainstreaming PCI as a learning experience provides the learner with the opportunity be aware of the issues and challenges facing people in the society.
- During the learning experiences be it formally, non-formally or in formally, those issues are discussed relating them with real life situations/circumstances.
- During the learning experiences, learners are given an opportunity to develop and apply both cognitive and psychosocial competencies that enable them to deal with realities and challenges of everyday life.

Examples of how PCIs are mainstreamed in the Curriculum Designs.

The following are examples of PCIs in selected Learning Areas

- *Movement Activities*
- *Grade: 1*
- *Strand: Basic motor skills*
- *Sub strand: Locomotor skills; Jumping for height*
- The PCIs being focused on is HIV and AIDS under Health Related Issues.
- The teacher advises the learners to report to him/her should one of them gets hurt (wounds and cuts occur) while playing games instead of handling them.

Example of how PCI is integrated in the learning experiences

- **Activity7:** Discuss the linkage between the following; learning outcome and learning experiences with the suggested PCIs

Example 2: Grade Two: Movement And Creative Activities Music.

Strand	Sub-Strand	Specific Learning Outcomes	Suggested Learning Experiences	Key Inquiry Questions
1.0 PERFORMING	1.1 Songs (7 lessons)	g) express ideas, feelings and emotions through singing for self-expression and effective communication,	In groups and individually, learners are guided to sing various types of age appropriate songs such as Kenyan folksongs, lullabies, patriotic songs, action songs, sacred songs and other topical songs on pertinent and contemporary issues paying attention to pitch and rhythm and the words.	4. Why would you prefer to sing together with others?

Link to PCIs:

- Education for Sustainable Development: Environmental awareness-through singing topical songs.
- Health Education: HIV & AIDS-through singing Topical songs
- Learner support programs: School Clubs-Music club
- Service learning and parental involvement-learners learning songs from parents
- Education for Sustainable Development: Topical song on Road safety
- Animal welfare -Topical songs on animals
- Citizenship-social cohesion-in performing in groups,
- Patriotism-singing the Kenya national anthem and folksongs

The role of parents in the learning process of a child.

- There is great recognition that Parents play a pivotal role in determining the success of a child's education.
- They are expected to be the first and best nurturers, stimulators and educators of their children.
- They have a shared responsibility with schools to provide an enabling environment that is conducive to learning and which motivates the child to achieve their full potential.

PEE Contd...

Activity 8: In groups of three, brainstorm on why it is important to involve a parent/guardian in the learning process of the child in CBC?

- **Parents should be empowered and engaged in the learning process of the child because:**
- Learning goes beyond the 4 walls of a classroom. Learning experiences should be extended at home to, reinforce what was learnt in school .

PEE Contd...

- Home should provide a platform for the learner to practise what was learnt in school
- The new dimension in learning focus on the learner as opposed to teaching. Learning should continue wherever the learner is .
- A learner is a natural explorer and the parents should therefore provide moral support, resources required for stimulation, exploration and development of competencies.

PEE Contd...

- Parents need to know that the focus is more on formative as opposed to summative assessment.
- Learners will not be competing against each other but against themselves so as to reach their highest potential.
- They should support learners in identification and nurturing of talents and in determining the learners career identification and progression
- KICD has developed PE&E Framework which will provide further guidance on how schools can empower parents to contribute to the learning outcomes of their children and to be engaged at all levels of Basic Education.

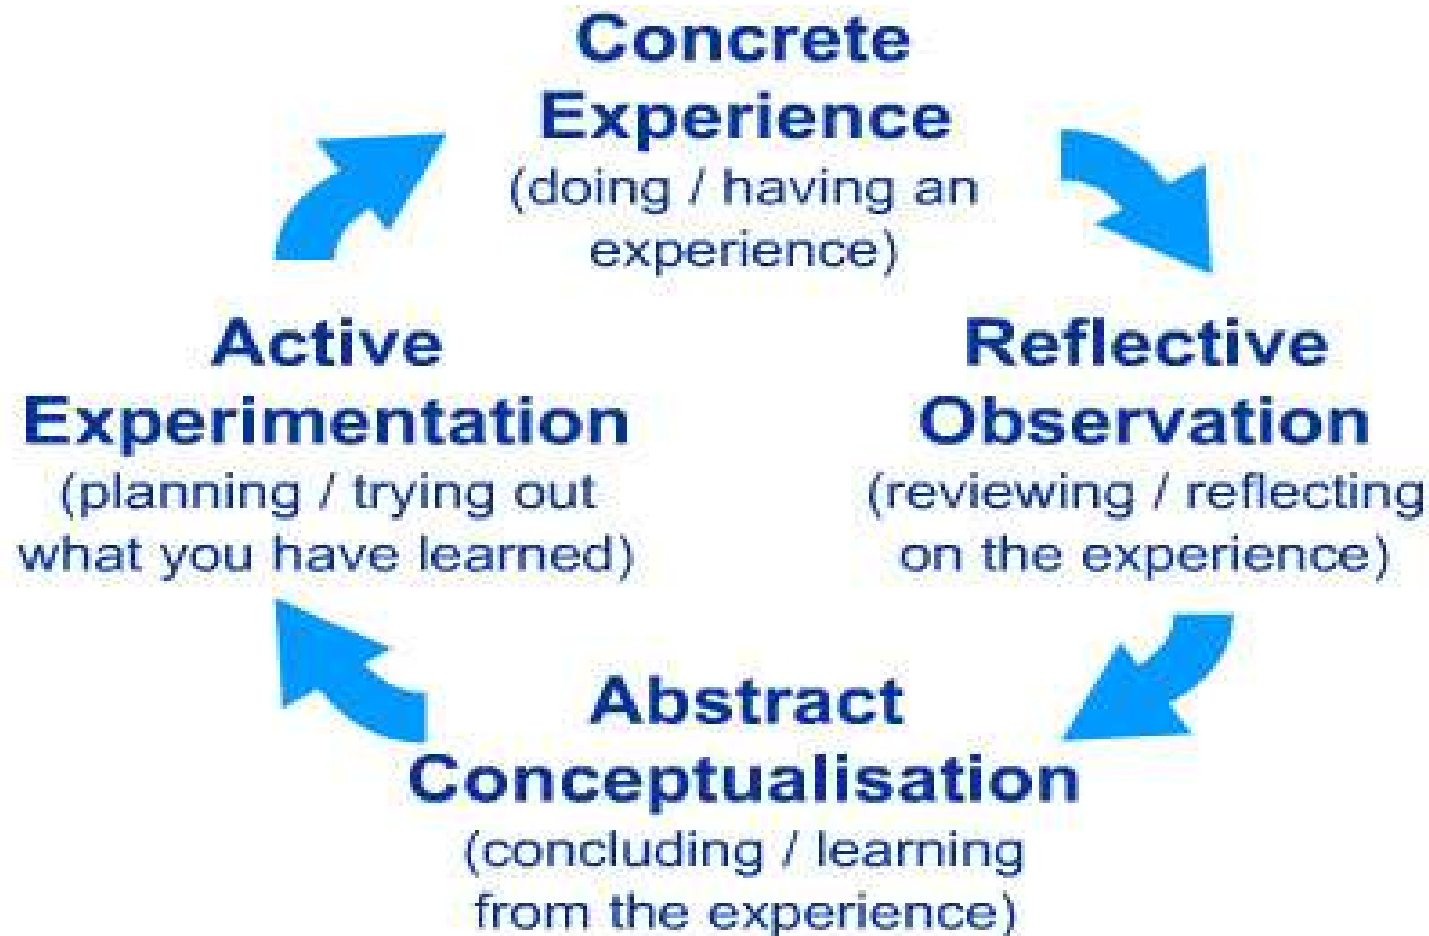

PEE Contd....

- **Empowerment** refers process of strengthening the capacity of parents to be actively engaged in nurturing learners' potential in and out of school. (increase knowledge, skills, change attitudes and practices)
- **Parental engagement** is about all activities that parents undertake to help their children succeed in school and life. It is a shared and continuous responsibility for parents in the child's education
- **School management and teachers** should be encouraged to utilize the guidelines to empower and engage the parents so that the schools and parents are jointly involved in nurturing learners potential.

Summary

**“Great teachers
engineer learning
experiences
that put students
in the driver's seat
and then get out
of the way.”**

Ben Johnson

LESSON PLANET

Where Teachers Go to Find Great Plans & Projects

Quote 2

“Parents are the ultimate role models for children. Every word, movement, action has an effect. No other person or outside force has influence over the child than the parent.”

Bob Keeshan

THANK YOU!
